Why you need a GroundSure Floodview when you move:

Is your property at risk of flooding?

What is the likely insurability
of your property?

GroundSure Floodview is a fully interpreted commercial flood risk assessment including detailed guidance on flood risk and a view on the likely insurability of a commercial property based upon the latest data from the Environment Agency.

GroundSure Floodview can be ordered for any commercial property in England and Wales and includes the following information:

- Details of flood risk insurability based on JBA's Insurability Index
- Guidance on the risk of surface water (pluvial) flooding using datasets from JBA Consulting
- Environment Agency tidal and fluvial flood risk data
- Environment Agency flood zones and details of areas benefiting from existing and proposed flood defences, and flood storage

- British Geological Survey groundwater flood data
- British Geological Survey geological indicators of flooding
- Environment Agency historic data which includes outlines of floods dating back to the 1600's
- Environment Agency NaFRA data.

Guidance is provided in a clear and succinct manner enabling rapid interpretation of the results. Flood risks are mapped on separate maps for clarity of hazards.

Geodesys is a leading provider of conveyancing information in England and Wales.
