Why you need a RiskView report:

Have you got all the potential risks covered?

Contaminated land, flood, ground hazards and energy & infrastructure risks all assessed in one desktop report.

RiskView Commercial has been designed to simplify the task of ordering searches when dealing with commercial transactions. It is currently the only product of its kind that will fully consider all of the following risks:

- **Contaminated land** – provides advice on the risks associated with the property being determined as Contaminated Land under Part 2A of the Environmental Protection Act 1990
- **Flood** – includes flood risk analysis, a statement regarding insurability and critical guidance for property owners and buyers
- **Ground hazards** – provides a screening for radon risk and potential ground instability, identifying the likelihood of subsidence risk due to natural hazards or previous mineral extraction in the area
- **Energy & infrastructure** – highlights any energy and Infrastructure projects that are likely to affect the enjoyment or value of the property, including drilling locations, licenses for oil and gas exploration, renewable power plants, wind generation, solar sites and land impacted by the HS2 rail link.

Each risk is considered in turn and the results are returned in a single easy-to-read report. RiskView Commercial helps you provide your clients with a fixed price service, safe in the knowledge you have considered all of the above risks.

The report comes with a clear summary front page which only displays results requiring further action or investigation. This significantly cuts down on the size of the report saving you time and is all backed up with “next steps” guidance from expert environmental consultants Argyll Environmental.

RiskView comes with the added benefit of an online viewing platform allowing your clients to explore the local area and understand the data and any next steps.

The report can be relied upon by all professional parties within the transaction with the added protection of £10 million professional indemnity insurance.

Geodesys is a leading provider of conveyancing information in England and Wales.
